- Amherst Pediatrics has set up the following security features:
 - Encryption: Amherst Pediatrics uses 128-bit Secure Socket Layer to encrypt the communication from my web browser to Amherst Pediatrics' secure web server
 - Dedicated web server for MyChart: Amherst Pediatrics separates the web server and electronic medical record machines. In the unlikely event that Amherst Pediatrics' server is compromised, no health information would be exposed since it is not saved on the web server. Patient information is stored only in the electronic medical record, behind a firewall
 - No Caching on the client side: Temporary caching of data in the browser is allowed to improve user experience but does not allow a follow-on user to view pages that had previously been viewed while using MyChart
 - Firewall: Personal health information is stored in the secure electronic medical record, protected from the Internet by a firewall
 - Session Timeout: After a period of inactivity, the logon session will time out
 - Monitoring: Amherst Pediatrics monitors the web server for evidence of break-in attempts and applies the latest security fixes as they become available
